

proCertum Combi

e-Signature and Encryption – Easy and Secure!

proCertum Combi is an application for the intuitive use of PKI services:

- creation and verification of e-signature in ETSI standards (TS 101 733),
- countersignature,
- data encryption and decryption,
- reliable time stamping,
- on-line certificate validation on the basis of PKI services (CRL, OCSP),
- delivery authority, signed data validation by Trusted Third Parties (DVCS),
- data can be stored in electronic vault.

proCertum Combi

proCertum Combi

proCertum Combi integrates various PKI (Public Key Infrastructure) services:

- e-signature – signing e-documents (in ETSI format), user can select a policy for signature creation:
 - internal signature (content and signature integrated into one file),
 - external signature (content and signature saved in separated files),
- time stamping – non-repudiated document time and data creation,
- encryption and decryption of single files or packages – data encryption by receiver's public key (DES, 3DES, AES),
- on-line certificate validation on the basis of OCSP,

- delivery authority – electronic equivalent of a registered letter; the service is delivered by Trusted Third Party, e.g. CERTUM General Certification Authority,
- countersigning – signing an existing document signature,
- non-repudiation* – signed data validation on the basis of DVCS.

) available in advanced **proCertum Combi version.*

System requirements:

Windows 95/98/NT/Me/2000/XP.
